

Old Man Emu

Nitrocharger Sport Suspension

Comfort, safety, lift, performance, durability; it's everything you want in a 4x4 suspension system.

Old Man Emu's Nitrocharger Sport shock absorbers are hand-tuned to match each individual make and model, then refined to suit a range of springs. The hand-tuning, rigorous dyno and in-field testing in our Melbourne lab ensure the best combination of comfort, safety and performance where it matters.

When configuring your personal vehicle, the right shock absorber will be matched to the correct spring for your use, whether it's weight carrying, towing or unladen, and all offer optimal lift for the vehicle.

The twin wall design of the shock absorbers offers more robust construction and protection for internal components.

Backed by over 25 years of development and over 150 service points across metropolitan and rural townships, Old Man Emu is a suspension system you can rely on.
